### **Problem Sheets**

- I am going to provide many problem sheets
- One problem sheets will be marked and worth 20% (you will know which one this is)■
- The other problem sheets are optional, but some small proportion of the questions will be on the exam
- I will go through the problem sheets, but if you have not attempted the questions you won't learn that much

#### **Course Structure**

Notes on Moodle and

https://ecs-vlc.github.io/aice1005/https://tinyurl.com/bddhrhcwl

- Lectures
  - ★ 11:00-11:45 Tuesday, Building 35 room 1005
  - ★ 16:00-16:45 Tuesday, Building 44 room 1041 (L/T A)
  - ★ 15:00-15:45 Thursday, Building 44 room 1041 (L/T A)
- Assessment
- ★ 80% Exam
- ★ 20% Problem Sheet

### What's in the Course

- This course is going to cover the core principles and mathematics behind machine learning!
- It is not going to explicitly teach different machine learning algorithms, although some will be covered.
- We are not looking at advanced algorithms but cover the principles fish
- There are very good implementation available (e.g. scikit-learn)
- Along the way though we will meet (often many times) particular algorithms

**Cracking the Code Topics** 

- Mathematics is the language of machine learning
- You can do machine learning without mathematics, but if you want to develop and understand advanced algorithms then you have no choice
- This course invites you on a journey to crack the code of mathematics for machine learning
- If this isn't a challenge you want, then this is probably not the course for you

Learning Theory

- → Bias-Variance
- ★ Overfitting, symmetry and regularisation
- ★ Ensembling, bagging and boosting
- Mathematics
  - \* Function Spaces: Kernel Methods and Gaussian Processes
  - \* Linear Algebra, embeddings, positive definiteness, subspace, determinants

# **Topics Continued**

- Optimisation
  - ★ Newton/Quasi-Newton Methods: convergence rates
  - ⋆ SGD, momentum, ADAM
- Constrained Optimisation
  - ★ KKT conditions
  - ⋆ Duality Linear/Quadratic Programming
  - ⋆ SVMs
- Convexity
  - ★ Convex sets: linear constraints, PD matrices
  - Convex functions
  - ⋆ SVMs. Lasso
  - ⋆ Jensen's inequality

# **Topics Continued**

- Probability
  - ⋆ Naive Bayes
  - ⋆ Gaussian Processes.
  - ⋆ Dependencies and Graphical Models
  - ★ Expectations and MCMC
- Advanced Methods
  - ★ Divergences: KL and Wasserstein
  - ⋆ VAEs and GANs
  - ★ Entropy and information theory
  - ★ Variational Approximation
